Ministries Complex, Kuwait City – Kuwait

- DIVISION:** Sky Climber Europe
- PROJECT NAME:** Ministries Complex, Kuwait City - Kuwait
- APPLICATION:** Motorized Telescopic Gantries for external maintenance of Sky Lights

The Ministries Complex, which has an area of 150,000 m², is located in a very busy area in Al-Murgab in the Kuwaiti capital, Kuwait City, and consists of 19 blocks accommodating six Ministries. The complex holds 60,000 employees and receives daily 13,000 visitors to various Ministry offices.

First United Co., the main contractor, approached Sky Climber and their local agent to design, manufacture and install 8 motorized telescopic gantries for the maintenance of skylights on the 3 buildings of the Ministry Complex with an all-glass roof.

Sky Climber designed and manufactured four gantries which can be extended from 12.0m up to 20.3m and four even longer gantries which are telescopic from 14.4m up to 23.0m.

The gantries are made out of lightweight aluminum and equipped with all required safety devices as per EN1808. The gantries traverse on parallel tubular tracks and take power from a buzz-bar (power rail) installed next to the tracks. From the gantries, the workers have full access to the skylight for all maintenance and repair jobs.

Type of Platform	Telescopic Lightweight Aluminum Gantry
Motorization	Sky Climber Gantry Trolleys, 400V/three phase, 0.15m/s
Safety Devices	Limit and Ultimate Limit Switches, lifelines
Rated Load	240Kg / 2 persons
Norms	EN1808
